Retrieving the Product Details Using the Product ID.

Description

Create a servlet-based application that shows a form to enter a product ID. The product ID is then validated, and product details are retrieved from the database and displayed to the user. You need to create a product table in MySQL and prepopulate it with data. Use JDBC to do all database processing.

Algorithm:

Step 1: **Create database project.**

Step 2: Create an HTML page to take in a product ID

Step 3: Set up JDBC to work with the application.

Step 4: Create a servlet that will take the product ID and use JDBC to query the database for the product

Step 5: If the product is available the servlet will display the product details
